8 pcs	Hinges for suction boxes
4 pcs	Chain/Belt, Z frame
8 pcs	Guide blocks, winding system
4/12 pcs	Guide blocks/wheels, Z frame

SERVICE IS FUTURE-PROOF FOR YOUR STRETCH HOOD

STATUS CHECK

You may manage most of the maintenance on your machine yourselves, but if you need to have your machine reviewed by an expert, we are ready to help.

You receive a status and condition report, so you know what should be replaced on your machine in the future.

BASIC SERVICE

When You order a Basic Service from us, you get a complete review of your stretch hood machine and the internal conveyor. And as the name indicates, you get the basic and most critical process parts of your machine replaced. We call it a “critical process parts package”, which contributes to maintain solid and reliable operation. We will perform various tests and generate a status and condition report, for you to decide next step in your maintenance cycle.

EXTENDED SERVICE

Extended Service is Basic Service's big brother, it is the service package for those who know that the machine needs a little extra care.

We give the machine extra care and change more parts than we do with Basic Service - in other words, we do not only change the critical process parts, but also the loaded moving wear parts that we know from experience are important for maintaining good and stable operation.

After service and testing, you will receive a status and condition report from us, so you know the current state of your machine.

WHAT IS RIGHT FOR YOU?

Spare parts package
Critical process parts

Spare parts package
Loaded moving wear parts

Cleaning of the machine
Exposed areas and guideways

Inspection of transport system
E.g. centering unit, infeed and outfeed

Adjustment of parts
Incl. check, re-tensioning and lubrication

Possible updates
to product packaging

Signed service certificate
Incl. climate calculation

Status and condition report
Incl. recommendations and offers

1 year warranty
on replaced parts

10% Discount
on products for 12 months

STATUS CHECK

Technician on-site
approx. 1 day

BASIC SERVICE

Technician on-site
approx. 2 days

EXTENDED SERVICE

Technician on-site
approx. 3 days

MAINTENANCE STOP OR OPERATIONAL SHUTDOWN?

PLANNED REPAIR

When you have had a service and a major repair has been announced in the service report, or you can see for yourself that a repair that should be carried out on the machine, it must be scheduled to suit your operation. It could be during holidays, in connection with a holiday when your plant has a standstill, or when there is a maintenance stop on another part of the line. We are flexible and your production comes first!

URGENT REPAIR

Accidents can happen, especially if your stretch hood is not regularly serviced, but human error can also cause breakdowns on a stretch hood machine.

Has the frame crashed into your product? Or has your product fallen over in the machine? Any component failure may occur unexpected and uncontrolled. Whatever the problem might be, there is a cost to not being able to operate the end-of-line packing.

We come quickly and we don't leave until the machine is running.

DIY SERVICE

Do you have your own team of employees to maintain your machines? If so, a C-KIT might be of interest to you!

Companies have different needs, different priorities and, not least, different levels of competence for technical challenges. Many customers choose an overall solution from InpaTeq with insurance and a guarantee for professional workmanship. That way, you know your costs and can be confident about the result. However, that does not mean that you should not have the opportunity to carry out service and repair tasks on your stretch hood machine with your own technical skilled personal.

We have put together a package with the most important spare parts for a stretch hood machine. Of course, this also includes instructions for changing these, as well as some tips and tricks along the way. With the right parts onsite, an instruction manual and a bit of technical skill, you have the opportunity to maintain your stretch hood machine yourselves.

For us, it is important to be able to meet exactly your needs at all levels - therefore C-KIT.

A C-KIT comes with free telephone support, if you should run into any challenges. Should you demand additional spare parts, or plan a repair, InpaTeq is always at your disposal.

Regardless of whether you choose a "Do-It-Yourself" solution, or take advantage of our overall solutions, you can count on a professional partner for your stretch hood machine - that is the DNA of InpaTeq.

SUSTAINABLE DEVELOPMENT GOALS

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

UN's 12th global goal is, among other things, about ensuring sustainable forms of production.

When 13.3% of the world's food, according to the UN, is lost after harvest and before it reaches retail markets, the manufacturers must see if there is anything they can do to reduce the overwhelming waste.

Economic growth and sustainable development require us to reduce our footprint on nature as soon as possible. One way is to look at how we produce and what we can do to reduce waste in production – not just in the food industry, but in all industries.

Plastic is undoubtedly a product that must be used with care, but can the end justify the means? When we know that good transport security can reduce damage during transport, can the use of plastic in industrial packaging then be justified?

At InpaTeq, we believe the answer is yes, if the packaging process is thought through and well optimized.

Inpateq

ABOUT INPATEQ

At InpaTeq, we believe that the days of the authorized manufacturers, that only service and maintain their own brands, are long gone.

We understand that the importance of a business, whose sole purpose is maintenance and service, can foresee the needs and challenges within each cooperation and that the possibility of multiple types and brands could very easily share the same location. That does not necessarily mean that you should have multiple service partners. And this is where we stand out - we are specialized in servicing all types of stretch hood machines and we are excellent at it.

Our goal is a long-term and optimal use of the already existing stretch hood solution - combined with a targeted goal to effectivity and implement contemporary solutions.

Our strength is our knowledge in maintenance, we strive after constant knowhow and knowledge in the process of packaging and we aim for our goal, which is perfect packaging and economic equitability in beautiful balance
